

Drivewell AutoCRM

User Manual

A step-by-step guide to every feature of the Drivewell automotive service CRM — from signing in, through running a daily workshop, to broadcasting personalised WhatsApp and email messages to every client.

Audience	Drivewell staff (Admins, Managers, Service Advisors, Technicians, Parts Staff).
Version	1.0
Status	Living document — updated as features ship.

How to use this manual Each feature is a self-contained section. Skim the **Purpose** line at the top of a section to decide if it's the one you need, then follow the numbered steps. Sections are ordered the way a new team member would learn the app: sign in first, then daily work, then admin tasks.

Contents

Getting started

1. Signing in & creating an account
2. Completing your profile (Onboarding)

Daily work

3. Overview (Dashboard)
4. Managing the client directory
5. Working a client and their orders
6. Your weekly tasks
7. The shared team board
8. Peer performance reviews
9. The company KPI board
10. Monthly reports
11. Reminders centre
12. Clock in / out (Attendance)
13. Notifications centre

Personal & admin

14. Your profile
15. User Admin
16. Connect WhatsApp & Email (Messaging)
17. End-to-end: sending a personalised message to all clients

1. Signing in & creating an account

Where	/login
Who	Anyone with a Drivewell account; new users start here.

Purpose. The single entry point for the CRM. Same screen handles new sign-ups and returning sign-ins.

Sign in

- 1 Open the app URL in your browser.
- 2 Click the **Sign in** tab if the form shows Sign up.
- 3 Enter your work email and password.
- 4 Click **Sign in**. You land on the Overview page if your profile is complete, otherwise on the Onboarding wizard.

Create a new account

- 1 Click the **Sign up** tab.
- 2 Enter your full name, a work email, and a password of at least 8 characters.
- 3 Click **Create account**. You are signed in automatically.
- 4 You are sent to the Onboarding wizard to finish your profile before you can use the rest of the app.

If you forget the difference

Tip The two tabs share the same screen — if you submit the wrong one you get an error toast, no harm done.

2. Completing your profile (Onboarding)

Where	/onboarding
Who	Every new user, automatically the first time they log in.

Purpose. Finishes the profile fields that the rest of the app expects: role(s), KPIs, and bottlenecks. You can't skip it.

Steps

- 1 After signing up you are redirected here automatically.
- 2 Tick one or more roles that describe what you do (Technician, Service Advisor, Manager, etc.).
- 3 Optionally write your **KPIs** — what you're focused on this period.
- 4 Optionally write your **Bottlenecks** — what's slowing you down.
- 5 Optionally upload a profile photo and set a job title.
- 6 Click **Complete profile**. You are taken to the Overview.

Approval

Note An admin still has to **approve** your account before you can edit most things. Until then you can browse but not write.

3. Overview (Dashboard)

Where	/dashboard
Who	All signed-in team members.

Purpose. The 'what's happening today' page. A summary strip plus a searchable client / order table.

Reading the page

- Summary cards at the top: active jobs, parts pending, overdue orders, vehicles in progress.
- Client table below: one row per client, with their most recent order on the right.
- Quick filter chips: **Failed**, **Due today**, **Parts not available**.
- Status dropdown lets you filter to a single order status.

Common tasks

- 1 To find a job, type the client name, phone, or plate into the search box.
- 2 Click a row to open the full client detail page.
- 3 Click **Failed** or **Due today** to triage urgent work.

Refreshing

Tip Data refetches automatically when you switch back to this browser tab — there's no Refresh button to hunt for.

4. Managing the client directory

Where /clients

Who All signed-in users. Bulk message requires ADMIN, MANAGER or SERVICE_ADVISOR.

Purpose. Master client list. From here you create one client at a time, import many at once, send bulk messages, or delete the whole list.

Create a single client

- 1 Click **New client** top-right.
- 2 Fill the intake form: name (required), phone, email, WhatsApp, address, preferred channel.
- 3 Optionally add the first vehicle (make / model / year / plate) and a first service order in the same form.
- 4 Click **Save**. You're taken to the new client's detail page.

Bulk-import from a spreadsheet

- 1 Click **Import**.
- 2 Click **Download template** if you don't already have a CSV — it shows the column names the app accepts.
- 3 Either upload a .csv / .xlsx file or paste rows directly into the textarea.
- 4 Review the preview table — rows with no name are flagged and skipped.
- 5 Click **Import N clients** to commit.

Column names the importer understands

- **Name** / Client name / Full name — required.
- **Phone** / Mobile / Tel.
- **Email** / Email address.
- **WhatsApp** / WhatsApp number.
- **Address**.
- **preferredChannel** / Channel (values: SMS, WHATSAPP, EMAIL).

Bulk message clients (WhatsApp / Email)

- 1 Click **Bulk message**.
- 2 Pick a **Channel**: WhatsApp or Email. Email also asks for a subject.
- 3 Pick an **Audience**: **All clients** or **Selected**.
- 4 On the **Recipients** tab, tick the clients you want. Clients without a usable destination are shown in red.
- 5 On the **Compose** tab, write your message. Use placeholders so each client gets a personal version: `{{name}}`, `{{firstName}}`, `{{vehicle}}`, `{{phone}}`, `{{email}}`, `{{plate}}`.
- 6 Check the counter (e.g. *Send to 42 clients*) and click the send button.
- 7 Review the result panel: sent / failed / skipped, and per-recipient errors.

Delete the whole list

Warning **Delete all** wipes every client and their cascaded orders, vehicles, parts and communications. There is no undo. It is meant for clearing a sandbox, not for production use.

5. Working a client and their orders

Where `/clients/:id`

Who All signed-in users; some actions are role-gated as noted.

Purpose. Everything about one client — contact info, vehicles, orders, parts, daily updates, communications, feedback and a full audit trail.

Edit contact info

- 1 Click **Edit client** in the header.
- 2 Change phone / email / WhatsApp / address / preferred channel.
- 3 Click **Save**.

Change the client's status

- 1 Use the **Client status** dropdown (Prospect / Active / Inactive / Archived).
- 2 Use the **Service status** dropdown to override what shows on the dashboard filters.

Add a vehicle

- 1 Scroll to **Vehicles**, click **Add vehicle**.
- 2 Enter make, model, year (required), and optional plate / VIN / colour / mileage.
- 3 Click **Save**.

Create a service order

- 1 In **Orders**, click **New order** (the client must already have at least one vehicle).
- 2 Pick the vehicle, write the description of the work.
- 3 Optionally set **Expected date** and **Assigned technician**.
- 4 Click **Save**.

Change order status

- 1 On the order card, open the **Status** dropdown.
- 2 Move through PENDING → IN_PROGRESS → COMPLETED as work progresses.
- 3 If the job stalls or fails, pick **FAILED** or **ON_HOLD**. You will be prompted to write a **Reason** — it's required.

Manage parts (role: PARTS_STAFF or higher)

- 1 On the order card, open the parts list.
- 2 Click **Add part** to add a new line.
- 3 Use the availability dropdown to flip parts between Not available, On order and Available.

Draft an AI apology (role: SERVICE_ADVISOR or higher)

- 1 On a FAILED, ON_HOLD or overdue order, click **Draft apology**.
- 2 Pick a **tone** (formal, warm, brief) and a **channel** (SMS / WhatsApp / Email).

- 3 Click **Generate**. Claude writes a draft using the client + order context.
- 4 Edit the draft if needed, then click **Save draft**. The draft appears in **Communications** as DRAFT — it is **not** sent.

Log feedback

- 1 Click **Log feedback** in the header.
- 2 Pick a 1–5 star rating, optionally link the related order, and write comments.
- 3 Click **Save**. The client's average rating and trend chart update immediately.

Add a daily update

- 1 In **Daily updates**, click **Add update**.
- 2 Write a short note (e.g. 'Diagnostics complete — waiting for parts').
- 3 Click **Save**. Your name and timestamp are recorded next to the note.

Reading the activity log

Note Every change made to this client (you or anyone else) is recorded with who / when / what at the bottom of the page.

6. Your weekly tasks

Where /tasks
Who Every signed-in user (your own tasks).

Purpose. A personal to-do list for the current work week, grouped by day, with anything you didn't finish last week carried over.

Add a task for yourself

- 1 Click **Add task**.
- 2 Enter title (required), description, priority, the work day and optional due date.
- 3 Leave assignee as yourself.
- 4 Click **Save**.

Update progress on a task

- 1 On the task card, open the **Status** dropdown.
- 2 Move PENDING → IN_PROGRESS while you work on it.
- 3 Mark COMPLETED when done, or FAILED with a reason if it can't be finished.

Carry-over

Note Tasks from previous weeks that are still PENDING or IN_PROGRESS appear at the top of this week, tagged **Carried over**.

7. The shared team board

Where /team
Who All signed-in users (read-only of others' work).

Purpose. Same task data as your /tasks page, but for the whole team. Two views and rich filters.

Switch views

- 1 Use the tabs at the top: **List** (cards grouped by day) or **Kanban** (four columns by status).
- 2 List view is best for planning; Kanban is best for daily standups and drag-to-update.

Filter what you see

- 1 Use the **Person** dropdown to focus on one teammate (or yourself).
- 2 Use the **Status** dropdown to hide completed work.
- 3 Use the **Priority** dropdown to surface urgent items only.

Assign a task to someone else

- 1 Click **Add task**.
- 2 In the assignee field, pick another team member.
- 3 Save. They get a notification and the task appears on their /tasks page too.

Drag to change status (Kanban)

Tip Drag a card from PENDING to IN_PROGRESS to COMPLETED — same effect as opening the card and changing the status dropdown.

8. Peer performance reviews

Where /reviews

Who All signed-in users. ADMIN/MANAGER and the reviewee see individual scores; everyone else sees the team average only.

Purpose. Each cycle (e.g. a week or a month) every team member rates every other team member on a small set of criteria.

Submit a review

- 1 Open /reviews. You see a card per teammate (you are excluded).
- 2 Click **Review** on the person you want to rate.
- 3 Score them on **Deliverables** (1–5) and **Communication** (1–5).
- 4 Optionally add a comment.
- 5 Click **Save**. If you've already reviewed them this cycle, your previous scores are pre-filled and updated in place.

Read the aggregate

- The big number on each card is the average for that person this cycle.
- If you are the reviewee or an Admin / Manager, you also see who gave which score.
- Otherwise you only see the average — individual scores are hidden from peers.

9. The company KPI board

Where /kpi

Who All signed-in users; everyone can create KPIs and vote.

Purpose. Collaborative tracker for company-wide KPIs. Anyone on the team can add a KPI, group it by category, and rate how the team is doing.

Create a KPI

- 1 Click **Create KPI**.
- 2 Fill in name, optional description, optional **category** (e.g. 'Customer Service').
- 3 Set **target value**, **unit**, and the **period** (start / end dates).
- 4 Click **Save**.

Vote on performance

- 1 On the KPI card, tap a star (1 = poor, 5 = excellent) to record your vote.
- 2 Tap the same star again to remove your vote.
- 3 The team average and total voter count update immediately.

Group by category

Tip Tick **Group by category** at the top to organise cards under category headings — handy when you have a long list.

10. Monthly reports

Where /reports
Who All signed-in users; the **Clear activity** button is ADMIN only.

Purpose. Activity reports rolled up by month. Pick a month, pick a view, and export.

Switch the month

- 1 Use the month picker at the top.
- 2 The three tabs (**Summary**, **By Employee**, **By Client**) all refresh to the selected month.

Download or share a report

- **Download CSV** — full spreadsheet export.
- **Copy to clipboard** — plain text version, useful for pasting into a message.
- **Email report** — sends the report (uses your configured email channel) to the address you enter.

Reading the columns

- **By Employee** — rows per employee, columns per week of the month, plus a total.
- **By Client** — rows per client with status, activity counts per week, and total.
- Numbers count distinct activity records (orders touched, communications, feedback, daily updates).

11. Reminders centre

Where /reminders
Who All signed-in users.

Purpose. Pulls together every reminder attached to clients / orders, sorted by due status so you can sweep through what needs attention.

Triage your reminders

- 1 Open /reminders.
- 2 Start with the **Overdue** group at the top (red).
- 3 Move on to **Due today** (amber).
- 4 Glance at **Upcoming** last so you know what's coming.

Complete or defer

- 1 On a reminder card, click **Mark done** when handled.
- 2 Or click **Snooze** and pick how long to push it.
- 3 Click the linked client / order to jump straight to the related record.

12. Clock in / out (Attendance)

Where /attendance
Who All signed-in users.

Purpose. Daily clock-in / clock-out record. Today's roster is visible to the whole team.

Clock in

- 1 Open /attendance when you arrive.
- 2 Click **Clock in**. A toast confirms the time.

Clock out

- 1 At end of day, click **Clock out**.
- 2 Your row in **Today** now shows both timestamps and total hours.

Times are in WAT

Note All clock-in / clock-out timestamps are interpreted as West Africa Time (UTC+1).

13. Notifications centre

Where	/notifications
Who	All signed-in users (your own notifications only).

Purpose. Every notification raised for you — task assigned to you, low rating on a client you serve, reminder due, etc.

Read and dismiss

- 1 Open /notifications.
- 2 Unread items have a red badge.
- 3 Click the title to jump to the related entity (a task, a client, etc.).
- 4 Click **Mark read** per item, or **Mark all as read** at the top.

Auto refresh

Tip The list reloads whenever you focus the browser tab — no need to refresh manually.

14. Your profile

Where /profile
Who Only yourself.

Purpose. Edit personal details, see how peers have rated you, or delete your account.

Edit your info

- 1 On the profile card, change name, job title, photo, KPIs and bottlenecks.
- 2 Click **Save**.

Read your performance card

- Shows your average score across all peer reviews.
- As the reviewee you always see individual attributed scores and comments.

Delete account

Warning The **Delete account** button at the bottom is irreversible — it removes your user record. Ask an admin to deactivate instead if you only need a temporary pause.

15. User Admin

Where /admin/users

Who ADMIN only — non-admins are redirected to the dashboard.

Purpose. Approve new sign-ups, assign roles, deactivate or delete user accounts.

Approve a new user

- 1 Open /admin/users.
- 2 Find the new account in the table.
- 3 Open the **Roles** dialog and tick the right roles (Technician, Service Advisor, Manager, etc.).
- 4 Save. The user can now perform role-gated actions.

Deactivate vs delete

- **Deactivate** — temporarily blocks sign-in. Reversible: click again to reactivate.
- **Delete** — permanently removes the user. Cascades to anything that belongs to them (tasks they created, reviews they gave, etc.). Confirm twice before doing this in production.

You can't lock yourself out

Note The Deactivate and Delete buttons on your own row are disabled — the app refuses to let you remove the account you're currently signed in as.

16. Connect WhatsApp & Email (Messaging)

Where /admin/messaging
Who ADMIN and MANAGER only.

Purpose. Configure Drivewell's outbound messaging credentials so the team can send personalised WhatsApp and Email messages from the Clients page.

Before you start

- **WhatsApp** — you need a Meta Business account and a permanent System User access token with the `whatsapp_business_messaging` scope. Note the **Phone Number ID** from your WhatsApp Business Account.
- **Email** — you need a Resend account, a verified sender domain, and an API key.

Connect WhatsApp

- 1 Open /admin/messaging and stay on the **WhatsApp** tab.
- 2 Tick **Enable WhatsApp sending**.
- 3 Paste the **Phone Number ID** from Meta.
- 4 Paste the **Access Token**. If a token is already saved you can leave this field blank to keep it.
- 5 Optionally fill in the business number and display name.
- 6 Click **Save WhatsApp settings**.
- 7 Use **Send test** with your own phone number to confirm the integration works end-to-end.

Connect Email

- 1 Switch to the **Email** tab.
- 2 Tick **Enable email sending**.
- 3 Pick **Resend (HTTPS API)** as the provider.
- 4 Fill in **From name** and a verified **From address**.
- 5 Paste the Resend **API key**. Leave blank to keep an existing key.
- 6 Click **Save email settings**.
- 7 Use **Send test** to confirm.

If a test fails

Note The error toast contains the raw provider response. A 401 from WhatsApp almost always means the access token has expired or doesn't have the `whatsapp_business_messaging` scope. A 422 from Resend usually means the sender address isn't verified.

Where the credentials live

Tip Credentials are stored in a single `MessagingSettings` row in the database. Only ADMIN/MANAGER can read this page, and the API tokens are never returned to the browser — the page only shows whether a token is set.

17. End-to-end: sending a personalised message to all clients

Where /clients (after /admin/messaging is configured)
Who ADMIN, MANAGER or SERVICE_ADVISOR.

Purpose. A worked example tying the messaging setup and the Clients page together.

Steps

- 1 Make sure WhatsApp and / or Email are enabled in /admin/messaging.
- 2 Go to /clients and click **Bulk message**.
- 3 Pick the channel.
- 4 Leave audience on **All clients** for a broadcast, or switch to **Selected** and tick the rows you want.
- 5 On the Compose tab, write a template like the example below.
- 6 Click **Send to N clients**.
- 7 On the result panel, confirm **Sent** vs **Failed** vs **Skipped**. Each successful send is also recorded on the target client's **Communications** timeline.

Example template (WhatsApp)

```
Hi {{firstName}},

We wanted to let you know your {{vehicle}} is ready for collection.
Drop by anytime between 9 am and 6 pm.

– The Drivewell team
```

Example template (Email)

```
Subject: Service update on your {{vehicle}}

Hi {{firstName}},

We've finished the work on your {{vehicle}} ({{plate}}). Reply to this email if you'd
like to schedule the next service.

– The Drivewell team
```

Why some clients are skipped

- WhatsApp: the client has neither a WhatsApp number nor a phone number on file.
- Email: the client has no email on file.
- Skipped rows still appear on the result panel so you know who to add contact info for.

Glossary

ADMIN	Top-level role. Can manage users, configure messaging, and see all reviews.
MANAGER	Can configure messaging, set KPI targets, and edit clients / orders. Sees all individual review scores.
SERVICE_ADVISOR	Front-desk role. Can edit clients / orders, draft AI apologies, and send bulk messages.
TECHNICIAN	Updates the status of orders assigned to them.
PARTS_STAFF	Updates parts availability on orders.
Order status	PENDING → IN_PROGRESS → COMPLETED. Side states: FAILED, ON_HOLD (both require a reason).
Client status	PROSPECT, ACTIVE, INACTIVE, ARCHIVED — manually set on the client detail page.
Service status	Optional override at the client level so a client with no orders can still appear in dashboard filters.
Cycle (Reviews)	A named review window, e.g. 2026-W21. Each (reviewer, reviewee, cycle) pair is unique.
WAT	West Africa Time (UTC+1). All clock-in / clock-out timestamps use it.
Bulk message	A single send campaign — one BulkMessage row plus one BulkMessageRecipient row per client.
